Push-fit floor drain

St Andrews Beach Brewery, Mornington Peninsula, VIC

St Andrews Beach Brewery is located on the Mornington Peninsular, a popular holiday and tourist destination just over an hour's drive south from Melbourne's CBD. The 38-hectare property was formerly a famous working racehorse training facility. The 1,200m grass racetrack is now an apple and pear orchard and the stables house chickens, pigs and sheep. The facility attracts a high number of visitors and provides a unique experience where they can enjoy craft beer and quality restaurant food in a beer garden surrounded by converted horse stables.

Project Design Brief

The aim of the brewery owners was to create a unique venue to attract visitors to the scenic Mornington Peninsular region by providing fresh delicious food and premium craft beer. The restaurant kitchen and bar area required a drainage system that would remove any hazardous standing water and be suitable for installation in a polished concrete floor.

ACO's Solution

- **Wexel** 150mmØ Push-fit stainless steel floor waste

Benefits

- Push-fit floor drains come complete with O-ring seals to provide a quick and watertight connection to both the PVC and HDPE pipe
- The stainless steel grate harmonises with the industrial polished concrete floor
- The supplied removable strainer basket facilitates easy cleaning

Other ACO Products Used

- Stainless steel gullies
